

ATALAIA STUDY

ANÁLISIS DE LOS TIEMPOS DE ATENCIÓN
INTRAHOSPITALARIA AL ICTUS AGUDO

MAIN OBJECTIVE

To describe the extra and in-hospital timelines of acute stroke care

SECONDARY OBJECTIVES:

To identify which factors may affect times of stroke care

To describe the geographic variability of care

To know about the organization of stroke care in the participating centers

Multicenter
prospective registry of
consecutive patients
during 6 months

CRD:
telemático
ResQ-ATALIA
(Stroke Angels)
Web:
www.qualityregistry.eu

INCLUSION CRITERIA:

Ischemic stroke

Known onset or LTSN < 24h

Occurring outside the hospital

Treated with reperfusion

EXCLUSION CRITERIA:

Hemorrhagic stroke

Unknown onset or LTSN > 24h

Occurring in the hospital

Not treated with reperfusion

VARIABLES:

Demographics

Medical history

Stroke care times: *onset-to-door, door-to-imaging, door-to-needle, door-to-groin, etc.*

Stroke data

Hospital organization

Reperfusion treatment (IVT and/or thrombectomy)

Safety
